

Expression of Interest in Developing a Research Grant within the Horizon 2020 Programme

About us

The Czech [National Security Authority](#) is an end-user and has overall competences in the area of the protection of classified information, develops and approves national cipher algorithms and security standards, issues personnel and facility security clearances. Since 2011 it is the national authority for cyber security issues.

We run the Czech [National Cyber Security Centre](#) that prepares cybersecurity standards, supports R&D and education in the field of cyber security and operates GovCERT.CZ, an accredited member of Terena-Trusted Introducer since 21st August 2014. We collect reports on cyber incidents, analyse them and provide help. We cooperate with CERTs / CSIRTs, the private sector and universities, we organize the national exercise CyberCzech and regularly take part in NATO and EU cyber exercises with very good results.

Our goals

As an institutional end-user we are keen to explore the possibilities of a full membership in a Horizon 2020 consortium. Our interest lies in, but is not limited to, solutions in the area of cyber security processing and analytical tools, early warning systems, security of critical infrastructure and cryptography (DS-07-2017, CIP-01-2016-2017, DS-06-2017, DS-02-2016, DS-05-2016).
